

Keep IT Secure 24

Persistent Penetration Testing.
We test your security continuously.

Companies usually hire PenTesting from time to time to test their Security. With the dynamics that applications and infrastructures require these days **testing from time to time is a poor approach** to your company's Security.

	Traditional approach	Keep IT Secure 24
Testing Security of Infrastructure and Applications	✓	✓
Deep Persistent Testing	✗	✓
Synchronized with Change Management Process	✗	✓
Re-Testing after each vulnerability is corrected	✗	✓
Provides a platform for Vulnerability Management	✗	✓
Online metrics related to risk and vulnerabilities	✗	✓
Dynamic Reporting	✗	✓

A cost-effective model in a Managed Services approach.

Our Management and Reporting Platform

KEEP-IT-SECURE-24 takes the penetration testing activity to a new level because it provides Persistent Testing and an Online Web Platform that customers can use to easily manage their assets, deal with associated vulnerabilities, extract reports and obtain online metrics.

Effective Risk Reduction

Testing your Security once a year will reduce risk but once changes are made new vulnerabilities arise and risk levels go up again.

Our model ensures effective risk reduction due to the fact that our services are persistent and integrate with your change Management inputs for a value-added testing.

Professional Certified Team

Our team members hold considerable relevant International Certifications (CREST, CISSP, OSCP, CISA, ISO 27001 LA, etc) and comply with the code of ethics of each certification.

We have more than 10 years of experience and have a considerable number of very relevant customers that can share their experience with our service.

This is not Scanning!

Our tests are not restricted to executing automated tools, particularly at the application layer and business logic, where automated tools lack accuracy and have a large amount of false positives and negatives.

Our tests are planned and executed manually by experienced Penetration Testers to maximize the quality of the results and to match the practice of the attackers.

Change Management Integration

Today's infrastructure and applications have to be very much dynamic and adapt quickly to business requirements.

Whenever a tactical or major change occurs, KEEP-IT-SECURE-24 can test if your changes had any impact to your Security.
